www.alliesinst.co

The company Allies international Dental-Instruments Pakistan was founded in 1999.

We are manufacturing and distributing high grade instruments for dentistry.

The popular choice of premium instruments for dentals internationally.

All **ALLIES** instruments are made from Medical Grade surgical stainless steel with a beautiful **satin finish** which reduces glare from surgery lighting.

All **ALLIES** instruments have a **unique streamline design** providing a perfectly balanced instrument.

Our priorities:

- Dental Surgery
- Diagnistic
- Implantology

A Worldwide Focus on Quality

We believe that our success is the result of both our company's commitment to excellence and the dedication and pride of our highly skilled instrument craftspeople, management and staff.

We have great pleasure in presenting you herewith our new catalogue

» ALLIES Dental Instruments «

intended to cope with the recent developments and the ever increasing needs of modern dentistry.

Thanks to an experience of many years and in close contact with noted dental surgeons and specialists in oral, maxillary, and facial surgery, we have succeeded in compiling a condensed but carefully selected range of instruments complying with all the requirements of modern and progressive dental and surgical practice. In case you should miss specific instruments, we will thankfully accept your advice and recommendations and do our best to fill also such individual needs.

ALLIES International Instruments are made of finest stainless steels of special composition by skilled instrument makers able to combine modern technology with the dexterity now as before required for the manufacture of most instruments. During production and again prior to shipment, all our instruments are subject to regular and strict quality controls.

In particular way, we endeavour to give our customers a most rapid and absolutely reliable service.

All these facts have contributed to ALLIES International Instruments having become known and highly reputed in all the parts of the world where they are giving daily evidence of their reliability in a thousand ways.

Already a century ago, the owner's grandfather had been a surgical and dental instrument maker reported to have acted as a co-founder of the ALLIES International Instrument Makers of the town of City Sialkot which, ever since, has been known as the world centre for the manufacture of surgical and dental instruments of highest quality.

We shall truly follow this tradition also in future.

A well-meant request ...
This comprehensive and systematically composted catalogue on dental intrumetns represents a reference book highly appreciated by experts in profession and trade. Its validity will extend over many years. It will always render you valuable service for your repeat order.

May we ask you, therefore, to keep it carefully for future needs.

MADE BY HAND

Technical Competence
with a long Family Tradition

Of best suited raw materials and taking advantage
of most modern technology, skilled and experienced
dental instrument makers are manufacturing instruments

Dental
American Pattern Extraction Forceps

FEATURES AND BENEFITS

Internal springs
Utilizing an internal spring hinge, American forceps remain in the open position reducing manipulation during surgery, increasing efficiency, comfort and control.

Apical designs
Provide a firm, secure grasp of the crown and root reducing the risk of buccal plate fracture and aiding in a more traumatic extraction.

Thin, sharp tapered beaks
For ease in penetrating the PDL and apical progression*, American* forceps feature apical beaks that detach the PDL, sever ligaments and reduce trauma at the surgical site. By severing the PDL, teeth become loose and are easily extracted from the Osteotomy.

Laser marked hinges
Aid in visibility during cleaning and sterilization, reducing the need to open sterilized pouches to identify forceps.

The Special Quality Dental Scissors

- Scissors are made using a variety of blades and depending on the procedure which the surgeon is performing are the scissors used. Technically there are 3 kinds of blades which are used.

1.Scissors and blade both are made using the same kind of metal.

2.Scissors are those scissors which have blades made with tungsten carbide.

3.Scissors are called black handled scissors .
These are also known by names such as super cut scissors or micro grind scissors.

- Smaller amount of bone should be removed in each of multiple bites. Never used the Beyer Bone Rongeur for removing large amount of a bone in a single bite.
- A constant cleaning of the blades is necessary.
- Beyer Bone Rongeurs should never be use to remove teeth.
- Only used it to cut through small segments of bone.
- Ideal for hospitals and specialty clinics.
- Durable high grade surgical stainless-steel material is used.
- Completely sterilizable.
- Mirror Polish Finishing.

Castroviejo needle holder, designed with a specific finger rest pad which ensures a greater precision level by facilitating the user's control during operation.

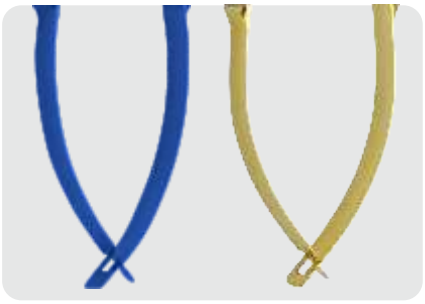

Double locking wings in tempered inox, for longer duration and perfect use.

Micro Needle Holders – Titanium

These needle holders in pure titanium are characterised by their special lightness and high degree of endurance.
Manufactured with smooth tips for very thin needles (8-0. 9-0. 10-0) and a safety double-wing locking system.

Blue anodized.

Rubber Dam Clamps

New clamps for **ALLIES** dental dam, superior quality in all details.
The superior quality of the stainless steel and a special temper treatment preserve the elasticity of the new **ALLIES** clamps and ensure a longer endurance to stress.
The anchorage holes are compatible with any type of clamp forceps;
the edges are bevelled to offer more comfort during utilisation.
Also the new rubber dam clamps, as all the other **ALLIES** instruments,
have a life time warranty against manufacture or material defects.

The bone scraper is intended for gaining of autologous bone material. This manual working assures an optimal cell viability and reduced absorption. The bone is collected in the underlying chamber while scraping and mixed up with blood simultaneously. The bone material may be used directly out of the chamber. The blade is suited for up to 30 applications.

All international shipments require that the consignee be responsible for all Customs Duty, Brokerage Fees and Local taxes.

Returns &Credits:

1: Any requests to return Goods must be made to the ALLIES's Customer Support Center within seven days after the date of delivery of the Goods to the Customer.

2: If the company agrees to accept any Goods for return, the Company will issue a "return reference number" and the Customer shall be liable to pay a handling charge of 20% of the price. No return will be accepted after 15 days.

3: Custom-made, made to order, color-coded, etched, and specially sourced instruments are non-returnable.

4: Instruments that have been used / sterilized are also non-returnable.

5: All products being returned should be sent in their original unopened packaging. All Goods must be returned to the Company carriage-paid. The Customer must provide the Company with proof of carriage.
For the avoidance of doubt, the Goods shall be at the Customer's risk until return delivery is accepted by the Company.

6: Goods returned without the prior written approval of the Company may be returned to the Customer at the absolute discretion of the Company.

Instructions for Use And warning

Please read carefully the following instructions before handling and using our instruments.

Initial Use

Instruments are supplied "non-sterile" and must be washed, rinsed and sterilized prior to use. Cleaning is best achieved via an ultrasonic cleaner or, if not available, instruments may be rinsed and scrubbed manually using a rigid brush with plastic bristles (NO metal bristles) using a suitable cleaning, disinfecting or decontamination solution.
After rinsing and packaging instruments should be sterilized following the manufacturer's instructions.

Autoclave Sterilization

Steam sterilization involves the use of steam under pressure, delivered at a particular temperature for an appropriate time. Steam sterilization should not exceed the duration of 7 minutes at a temperature of 134°C and pressure of 2.1 bars. Ensure that instruments sterilized in packaging such as pouches or wraps are dry at the completion of the sterilization cycle, any moisture remaining inside the packaging material may cause corrosion or oxidation of the instruments. Sterilized instruments must be stored in a dedicated, dry and dust free environment.

Dry Heat Sterilization

exceeding 177°C (350°F) weakens the temper of the steel in the Instrument and as a consequence reduces its cutting performance leading to cutting instruments losing some of their sharpness. Darkening of the instruments may also occur and brown spots may appear similar to oxidation.

Warning

A) failure to observe the aforementioned instructions may lead to permanent damage the instrument and consequently the voiding of all warranty.Surgical instruments must always be handled with care and it is the responsibility of you, the client, to attend to the proper care and attention of the instrument.a) Each instrument is designed for a specific purpose and using it beyond the scope of its intended use may result in damage to the instrument which may in turn lead to serious injury or even death of a patient.
B) All instruments must be checked and tested for correct function prior to use. Visible defects, deformations or scratches will affect the functioning of the instrument and they should not be used in the event you have any concerns about their condition.

C) Worn or damaged instruments should be immediately removed from use.

D) ALLIES declines all responsibility for any physical damage caused by the use of worn or defective instruments which should have been replaced as a result of their poor condition.

E) Each ALLIES instrument is carefully checked and inspected prior to packaging and delivery and therefore it is free from any manufacturing or functioning defect at the time of supply.

NOTES.
